

T-BOX Helps Distrigas Automate Gas Distribution Metering

For more than 75 years, Distrigas of Belgium has supplied natural gas to industries, resellers, and electricity producers. With its export base in Belgium, the company occupies a strategic position at the hub of Europe's gas networks. Annual turnover is 74.6 billion. As the leading gas provider in Belgium, Distrigas supplies natural gas to public and major industrial consumers and also plays an active role in international gas transit.

Since beginning gas distribution in the 1960s, Distrigas has used the latest and most accurate measurement systems for counting gas volume. A project was launched to register and control its meters automatically and transmit the data to a central computer system. After a thorough investigation of available solutions, Distrigas chose the T-BOX advanced telemetry system.

Wherever Distrigas needs information on gas volume, a T-BOX system is connected to the existing meter, to a turbine giving pulses, and a pressure and temperature transducer for the calibration. Today more than 550 T-BOX outstations are remotely connected to a central computer using PSTN communication.

T-BOX is providing Distrigas with a wide range of benefits:

- Real-time information on consumption and distribution
- Automatic alarming on pressure drops
- Remote control of the gas meter
- Automatic invoicing of real consumption
- Interventions are reduced to a minimum
